

Chapter 10

Purpose: This assignment is to gain experience with deadlocks.

Problem: Fix the two programs supplied by the instructor.

Begin with a copy the following starter programs: `/net/326/deadlock1.c`
`/net/326/deadlock2.c`

Submit 2 corrected programs.

Submission 1: correct **deadlock1**. Organize the locks so that the deadlock no longer exists.

Submission 2: correct **deadlock2**. Organize the locks so that the deadlock no longer exists. Hint: a special case will be necessary, for example if statement with `4 ==`.

Demo: Your corrected programs. Be ready to explain to the instructor exactly what you changed (put comments).
